DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1, claim(s) 1-22, 4, 49-50, and 54-55, drawn to a device that executes an operation based upon judging whether data matches position information.

Group 2, claim(s) 23-39 and 47, drawn to a system including a client which holds position information and generates data by adding position information to the data and transmitting the data to a receiver who compares the position information to position information of a second unit and judges whether to allow execution based upon the comparison.

Art Unit: 2134

Group 3, claim(s) 40-45, 48, 51-53, and 56-57, drawn to a method of acquiring a public key, encrypting data, sending the encrypted data to a receiver who generates a private key with a first pass phrase and allows execution if the decryption is successful.

The inventions listed as Groups 1, 2, and 3 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Inventions 1, 2, and 3 are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination 1 has separate utility such as preventing a device from executing if it is not positioned in an appropriate place thus increasing security, subcombination 2 has separate utility such as holding position information for a first device and retrieving position information from a second device in order to perform a comparison of position information to enable execution, and subcombination 3 has separate utility such as encrypting data and transmitting the encrypted data to a second device and using decryption and position information in order to authorize a device to execute. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found

Art Unit: 2134

allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
